Selected Projects

Automated Website Vulnerability Scanner

June 2025

- Worked in an automated website vulnerability scanning system that used **LangGraph** to manage task flow for reconnaissance, summarization, and data retrieval.
- Integrated the **browser-use** agent to simulate attacks (e.g., SQL injection, DDoS) and identify vulnerabilities through black-box testing.
- Added an LLM-based summarizer to condense outputs from tools like **nmap** and **nikto** into readable vulnerability reports.
- Mitigated LLM context length and token cost issues by storing detailed scan outputs in **PGVector**, with summaries referencing the full data when needed.
